

Where requirements get refined, not invented.

Project the Flowchart fullscreen. The client sees their business already mapped. That is the moment.

The methodology library loads at project start. Process maps drawn, user stories written, acceptance criteria drafted. You project the Flowchart fullscreen, drill into process steps with the client, refine stories in real time. AI rewrites in their vocabulary. Fit-Gap classification happens on the spot. The library stays in your system after go-live.

The Flowchart in fullscreen mode — the most-projected screen in the suite.

The Flowchart

Fullscreen swim-lane process map. THE projected screen.

Pre-written stories

User stories drafted from the methodology library.

Fit-Gap tagged

Every AC marked Fit, Gap, Workaround, or Out-of-Scope.

AI refinement

Claude rewrites stories and AC in your vocabulary in seconds.

Client vocabulary

Refine the language during the session, not after.

Take it with you

Documentation lives in the system, not a PDF in SharePoint.

What changes when the methodology is already built.

Four concrete outcomes you will see in the first month.

The work the consultant used to bill for during discovery has already been done. The workshop becomes a refinement session — much faster, much sharper, and the documentation you leave with is the system itself, not a deliverable.

Discovery in days, not weeks

Walk into the first session with hundreds of process steps already mapped and stories already written. Skip the four-week 'understand-the-business' phase entirely.

Budget you can defend

Fit-Gap analysis upfront. Know which requirements are out-of-the-box, which need custom development, which can wait. No surprise change orders mid-project.

Documentation that lives on

When the engagement ends, the methodology lives in your system. Your team can navigate it. Onboard new staff against it. Run the next project from it.

Real-time refinement

AI rewrites stories in your vocabulary as the project evolves. New acceptance criteria drafted in seconds. Fit-gap re-classified on the fly.

NO MORE SCOPE SURPRISES

Walk into every workshop knowing what will be discussed.

The methodology lives in one place; the client and the consultant look at the same thing. Scope creep stops being a discovery and starts being a deliberate decision.
